Also I am working on finding sn investor for my services, if I am able to find an investor I would like to have you guys work for me full time managing my website during the hours when me and my team is sleeping.

I will get started on writing the code with cursor ai this week and hopefully I should have the zip file ready by Thursday or Friday

I am just arriving home from work, later today I will begin writing the code for the additional service for 4SIGHTAI

Thank you for your consistent efforts with working on my website, I was wondering is it possible to add a subscription pay wall for the Parental Monitor feature? If I decide to market 4SIGHTAI to Customers with children they will be able to see this feature on the website if they just wanted this service. If I need to do the coding to add the subscription pay wall just let me know.

I prefer to approve everything after its completed, its the proper of doing business if you don't mind.

I also check the parental monitoring link using Google chrome and this is what should up

Github: Angelosmith71

Pw: 11Churchbus$ I am on my account now looking for my api keys

It is saying that you access is still active and I cannot send you a invitation

I will check everything, I am just waking up

I think the next job I would want to convert the website into an actual app. I will let you know if I need your team assistance.

I am still working on a few ideas before I proceed on the app development

I am thinking about integrating Groq into my platform to create a cloud intelligence layer. It can be used to for LLM and more efficient user experience on 4SIGHTAI.net I charge users for the token usage. What do you think

This will be included in the app development?
